It is deplorable to put people at risk by not labeling the risks of Glyphosate. It is proven to cause cancer. Warnings must be required for exposure and none of this toxic poison should get close to any drinking water or wild creeks or rivers.

Do you understand that this garbage NEVER goes away and is horrible for all humans and wildlife. It should be banned in all of California. Let us become a state that stands up to Monsanto and the destruction it is incurring to our planet. This is atrocious and it has to STOP!
